spec:
  bio:
    name: Antonio
    surname: Di Stefano
    description: |
      Hello there! I am an Italian dev living in London. As far as I can remember I have always
      been quite fond of tech, especially programming, and I think this could be a great opportunity
      to test out and improve my skills. Not just a dev though, I am also very passionate about food,
      weird-facts and a lot more things!
  jobs:
    - company: eBay (git commit -m "WIP - currently working here!")
      roles: ["Full-stack software engineer"]
      duration: 1+ years
      description: |
        I am currently part of the Shipping team in eBay and I work with pretty much anything shipping
        related! I am also working on a few other CI/CD related projects as well as some security work,
        both mentoring as a Champion and doing some research on our systems. I have also contributed
        to some systems that are part of our core infrastructure.
    - company: Soldo
      roles: ["Software engineer", "Project manager"]
      duration: 3 years
      description: |
        Soldo is a B2B card issuer with a focus on post-transaction, making the accountants life easier.
        There I worked both as a developer for all the 3 years and as a PM during the last year, during
        which I was mostly working with BI/data-science initiatise, and various other projects of different
        natures.
  study:
    - school: ELIS College
      duration: 2 years
      description: |
        ELIS College is a professional school with a focus on hands-on experience, embedding us from the
        get go in various hands-on experiences and projects with well-known companies in the area
  skills:
    - The java ecosystem, including various frameworks and some of the languages running on the JVM like
      Kotlin, which I am very fond of, and Groovy
    - JS/TS with a focus on react, but also other UI frameworks like vue, angular, etc and some node backend
      as well. I recently started looking a little bit into deno, a new runtime for JS that natively supports
      TS as well (I took this change to start writing some bazel rules https://github.com/TheGrizzlyDev/rules_deno)
    - Lots and lots of various scripting languages, but mostly python and ruby
    - Worked with docker, k8s and the likes
    - Good experience in agile project management
  supportedLocales: ["IT", "EN"]
```
